

Carbon Dioxide Analyzer

MEZUS 320

| CO₂ Analyzer

MEZUS 320 CO₂ Analyzer is the analyzer that measures minimum amount of CO₂ in air correctly through the optical curved mirror which has long light path and durability, using the Non-dispersive Infrared Analysis Method (NDIR GFC). MEZUS 320 is equipped with the specially designed GFC wheel with no leak for a long time and the stable infrared lamp (IR Source).

All gas analyzers of MEZUS series were equipped with screen interface design using TFT-LCD & Touch screen so that user can operate the analyzer and maximize the visual image, and MCU applied to the analyzer is ARM11 32bit processor and operates based on Linux Kernel 2.6 which maximizes the system stability due to multiprocessing.

In addition, the analyzer is equipped with automatic zero correction system (Auto Zero) for smooth measurement and various interfaces (Ethernet, RS232, RS485, USB, DIO, Analog out) so that user can use it more conveniently and usefully.

| Features

- Ranges 0-500 / 1,000 / 2,000 ppm, user selectable.
- 7inch TFT LCD & touch screen interface.
- Ethernet, RS-232, RS-485 & USB ports.
- USB interface utilizes for System Program Update.
- Temperature & pressure compensation
- Internal zero(optional)
- Stored data can be retrieved RS-232, USB Interface and TCP/IP network
- In built Data Logger Utilizes NAND-Flash to Store up to 5min/1year averaged data
