

Online COD Sensor

Introduction

The UV multi-spectral COD sensor is a new generation of environmentally friendly COD sensor. It adopts dual LED light path design, no reagents, no pollution, and more economical and environmental protection. Low power consumption, small size, and easy installation, water quality monitoring is available online. It automatically compensates for turbidity interference and can be combined with an air cleaning device to eliminate contamination and reduce on-site maintenance work, even with long-term monitoring.

Features

- Digital sensor, RS-485 output, support MODBUS
- No reagents, no pollution, more economical and environmentally friendly
- Can measure SAC, COD, TOC and other parameters
- Automatic compensation for turbidity interference for excellent test performance

CODCEM

Technical Parameters

Communication protocol	RS-485, MODBUS
Measuring range	COD 2.5 - 1000mg/L equiv. KHP
Resolution	0.1 mg/L COD
T _{response}	< 60s
Accuracy	≤ 5%
Temp range	+5 ~ 45°C
IP grade	IP68
Pressure	1 bar
Calibration	1 or 2 point
Power supply	DC 12V +/-5%
Sensor Dimension	54mm x 310,5mm
Senor cable	10m (standard)
Material	POM and 316L
